How to read this report

Strength says how clearly a signal points to an edit. Strong findings usually deserve a request for the original document or a check with the source. Moderate findings deserve a closer look alongside the rest of the file.

A finding is not proof of fraud. Files are edited for innocent reasons too, such as cropping a scan or removing a password. Trustable shows what it found and where; your underwriter, adjuster or fraud team decides what happens next.

No AI is 100% accurate. Results can be wrong in either direction, so every finding comes with its evidence and a person makes the decision.

What a reviewer does next

Write down what was found and where. Ask for the original statement, ideally straight from the bank, or verify the account through a direct verification service. Don’t share suspicions with the applicant before the verification comes back. Escalate to your fraud team if the original confirms the edit.
